Parishes, Market Towns, Villages, Hamlets,
and smallest Places, In

ENGLAND and WALES.

Alphabetically set down, as they be in every Shire.

With the Names of the Hundreds in which they are,
and how many Towns there are in
every Hundred.

So that naming any Town or Place in *England* and *Wales*, you
may presently in the Alphabet find it, and know in what Shire
and Hundred it is, and so know the distance from it to the Shire
Town, and in the large Table the Shires in *England* how far to
London, or from it to any other Town in *England*.

A Work very necessary

For Travellers, Quartermasters, Gatherers of Breefs, Strangers,
Carriers, and Messengers with Letters, and all others that know
the name of the place, but can neither tell where it is, nor how
to goe unto it.

If you would find out any Shire, note that the Shires lie
Alphabetically, beginning with *Bark-shire*, and so
following accordingly.

Summa cuique virtus pulcherrima merces.

LONDON: Printed by M. S. for Tho: Jenner, at the
South-entrance of the Royall Exchange. 1662.

The first Edition of this book was by David Van Laugerem
 and Published in 1667 4to
 1623. 1635. T.C.

Of divers Measures

The Measures of Differing Nations
and Especially those of the Distances of Places,
being very various, It is necessary to premise
something about them in the following Works
and 4 following Articles, ^{Thus far abstract from} ^{Eachard's Dictionary or}
^{from & same} Gazetteer

The English Mile by Statue Law consists of
5200 London feet, or 1760 Yards, or of furlongs,
of these Miles the Experiments of Mr Norwood,
and Mr Picart, do Demonstrate 69 and
some what more, to be a Degree of $^{\circ}$ Earth's
surface, though a degree has been generally
reckon'd but Sixty Miles

A Marine League is the th 20 part of a degree
and most Nations agree to Reckon so for

Distances at Sea

A French League is $4^{\circ} 25^{\text{th}}$ part of a Degree,
being near 2 English Miles, and three quarters
German

An German Mile is reckon'd the 15th part of a degree,
or better then four English Miles.

A Dutch Mile or Such as are used in Holland,
is near the 19th part of a Degree, being about
three English Miles and an half.

An Italian Mile is a Thousand paces of five
Roman feet each, And the Roman foot
being $\frac{1}{5}$ of an Inch Less than y^e London foot, or as
29 to 30; It follows y^t 76 Italian Miles are
nearest to a Degree, And the Turkish Miles are
reputed Equal to the Italian.... The Danes
Sweeds and Hungarians make Long Miles
being about a German Mile and an half, or at
least 5 or 6 English Miles... The Polish Miles,
are near Equal to y^e Dutch Miles, and reckon'd about
20 to a degree. The Scotch and Irish miles are
longer than the English by about half, and are
not Defin'd, by any certain Measure, y^t I have
learn'd. Only Culverius makes 50 Scotch Miles to
The Russians use a short measure call'd Voyt,
which is a little more than three quarters of an
English Mile... The Arabian Mile both Ancient
and Modern, is about an English Mile and a quarter.

The use of all the ensuing Tables.

TO know the distance between any two Cities or Towns in any of these Tables, seek the places desired in the upper and side Catalogues of Townes, and direct your eye from either place between the lines both from above and from the side, and where the lines meet in square you shall find the number of miles. For Example; If you would know how far *Lincoln* is from *Excester*, look in the Card of Shire Towns, and find *Lincoln* in the side, and carry your eye directly from thence between the lines untill it come under *Excester*, and where they meet in square you shall find 178, which is the distance of miles.

If you find any Town in the side which will not extend to make a square with the desired Town above, then look for the Town which you find in the side in the upper part, and the upper part in the side. For Example, If you desire to know the distance between *Glocester* and *Oxford*, if you look *Glocester* in the side, you cannot bring *Oxford* in a square with *Glocester*, but if you look *Glocester* above and *Oxford* in the side, you shall find the square and the distance 35 miles, and so of the other ensuing Tables.

To know whether you are to travell, East, West, North or South, from the place where you are, to the place whither you intend to goe, and through what Shires you must passe.

Look in the small Map of England, placed before the great Table of Shire Towns, & draw a streight line from the next Shire Town lying in your way to that Shire Town which is next the place whither you desire to goe, and you shall immediately see whether your Journey be East, West, North or South, and what Shires the line brings you through, those Shires you must passe. As for Example, If you would travell from *London* to *York*, you will perceive by the Map that it lyeth North from *London*, then draw a line or carry your eye streight from *London* to *York*, and you shall find the way lyeth through *Middlesex*, *Hartford-shire*, *Huntington-shire*, *Northampton-shire*, *Lincoln-shire*, *Nottingham-shire*, and *York-shire*; and so for any other place.

Again to know what Market Towns lie in your way which way soever you travell.

When you have seen in the generall Map what Shires you are to passe through, observe whether you must passe through the middle or the skirts of each Shire, then turn to the Tables of those Shires, and at the foot of each of them you shall have a Map, wherein the Towns are signified as they lie in every Shire by the first letter of every Town, & if you must pass through the middle of the Shire, then the letters about the middle of the Map declare the Towns by which you must go, but if through the skirts of the Shire, then the letters in the skirts of the Map are your direction.

A detailed map of the county of Glamorgan, showing its various parishes and towns. The map is oriented with North at the top. The coastline is on the right, with the Bristol Channel to the west. The map is divided into numerous small areas, each labeled with a name, often followed by 'parish' or 'town'. The names are written in a cursive, handwritten style. The map is surrounded by a border, and there are some numbers and letters in the margins. The map is a historical document, likely from the 18th or 19th century.

The map shows the region around Worcester, with various towns and roads. Key locations include Lichfield, Dudley, Bromwich, Worcester, Hereford, Ludlow, and Warwick. Roads are marked with numbers and names, such as 'Worcester Road', 'Lichfield Road', 'Dudley Road', 'Bromwich Road', 'Worcester Road', 'Hereford Road', 'Ludlow Road', and 'Warwick Road'. Distances are marked along the roads, and the map includes a compass rose and a scale bar.
